

Mason Grajczyk

Computer Engineering · Systems & Infrastructure

(763) 688-3442 masongrajczyk@icloud.com
Wayzata, MN mason.mazonvision.com

Computer Engineering student and Technical Intern at Erdman Automation, building LLM-powered automation and real-time analytics tools. Hands-on experience architecting, deploying, and operating Linux, container, and network infrastructure end to end. Seeking systems, infrastructure, and DevOps roles.

Education

North Dakota State University

Fargo, ND

B.S. Computer Engineering · GPA 3.0 / 4.0

Expected Spring 2027

Relevant coursework: Digital Logic Design, Embedded Systems, Computer Architecture

Experience

Erdman Automation

Princeton, MN

Technical Intern

June 2026 – Present

- Engineered an in-house, LLM-powered automation tool giving employees self-service access to AI-driven workflows.
- Built a Python and SQL operations-analytics app unifying shipment, quoting, and employee performance data into a single source of truth.
- Deployed real-time data monitors that surface workflow bottlenecks and drive employee efficiency.
- Delivered additional in-house applications from requirements through deployment in partnership with end users.

Ogi

Edina, MN

Medical Records Technician

June 2024 – August 2025

- Managed indexing and electronic storage of critical records, resolving discrepancies to improve retrieval reliability.
- Consolidated data from multiple sources into accurate, compliant records for cross-departmental use.

NDSU Wellness Center

Fargo, ND

Outdoor Adventures

August 2023 – Present

- Trained new staff on safety protocols and risk-management standards.
- Owned inventory control and quality assurance for technical equipment.

Technical projects

Details at mason.mazonvision.com

Containerized private cloud platform. Architected and operate a production-style Linux private cloud of containerized services with end-to-end edge networking, automated TLS, and documented disaster recovery.

Linux · Docker Compose · Nginx · Cloudflare · TLS

MasonDeck hardware control console. Raspberry Pi 5 control plane delivering live service health, remote server operations over an SSH-driven API, and network-wide DNS filtering from a single pane of glass.

Raspberry Pi 5 · Embedded Linux · SSH · DNS

GPU-accelerated video processing pipeline. Hybrid GPU/CPU transcoding pipeline on FFmpeg with AMD VAAPI acceleration. Benchmarked encoders, identified a severe HEVC bottleneck, and re-architected for throughput.

FFmpeg · AMD VAAPI · Docker · Benchmarking

Technical skills

Infrastructure	Linux, Docker, Docker Compose, Nginx, Cloudflare, TLS / PKI, SSH
Networking	DNS architecture, reverse proxying, network-wide DNS filtering, network migrations
Software + data	Python, SQL, JavaScript, Java, MATLAB, VHDL, LLM integration, real-time dashboards
Hardware	Raspberry Pi, embedded Linux, GPU acceleration (VAAPI), FFmpeg
Operations	Performance benchmarking, disaster recovery, service monitoring, technical documentation
